## News: SATURN 2016 Draws Record Attendance

The Software Engineering Institute (SEI) hosted its twelfth annual SEI Architecture Technology User Network (SATURN) Conference on May 2 through May 5 in San Diego, California. The conference attracted the highest attendance in the history of the event, drawing attendees from 20 countries and 126 organizations. Participants shared ideas, insights, and experiences about effective software architecture practices for developing and maintaining software-intensive systems.

"I believe that one of SATURN's greatest strengths is a focus on architectural thinking, through the application of the latest tools," said attendee Patrick Kua, technical principle consultant for ThoughtWorks. "Unlike some other conferences, I felt like the program tried to assemble a good collection of experience reports and presentations that emphasized the architectural principles, rather than focusing on the current tools."

## SEI Podcast Series: Threat Modeling and the Internet of Things

Threat modeling, which has been popularized by Microsoft in the last decade, provides vulnerability analysts a means to analyze a system, identify various attack surfaces, and use that knowledge to bolster a system against vulnerabilities. A manufacturer that has been making products for more than 50 years knows what its products do. But what changes about a product when the manufacturer embeds a network connection in it? Manufacturers who are new to Internet connectivity now must consider vulnerabilities such as debug ports left turned on and default passwords. Computer security must become part of safety testing for these products.

In this podcast, Art Manion and Allen Householder of SEI CERT Division's Vulnerability Analysis team talk about threat modeling and its use in improving security of the Internet of Things.

## SEI Blog: 10 At-Risk Emerging Technologies

In today's increasingly interconnected world, the information security community must be prepared to address vulnerabilities that may arise from new technologies. Understanding trends in emerging technologies can help information security professionals, leaders of organizations, and others interested in information security identify areas for further study.

Researchers in the SEI's CERT Division recently examined the security of a large swath of technology domains being developed in industry and maturing over the next five years. The CERT researchers focused on identifying domains that impacted not only cybersecurity but also finance, personal health, and safety.

Christopher King

In this blog post, Christopher King highlights the findings of a report he and his fellow CERT researchers prepared for the Department of Homeland Security United States Computer Emergency Readiness Team (US-CERT) and provides a snapshot of our current understanding of future technologies.

## Events: 13th SEI Software Engineering Workshop for Educators

Building on the twelve-year success of the Architecture-Centric Engineering Workshops for Educators (ACE), the SEI will this year expand the workshop's scope to embrace the entire field of software engineering. To reflect this growth, the event is now called the SEI Software Engineering Workshop for Educators. The SEI will host the workshop from August 2 to 4, 2016, at its Pittsburgh, Pennsylvania, headquarters. The workshop fosters an exchange of ideas among educators whose curricula include the subjects spanning software engineering. The three-day workshop will feature two days of SEI courses.

This year's courses cover big data and service-oriented architecture design. Day 3 is devoted to invited talks and group sessions, facilitated by SEI team members, where participants share experiences, ideas, and tangible artifacts for introducing software engineering topics into the college curriculum.

The workshop is open to any accredited, college-level educator. In lieu of an entry fee, attendees are expected to bring a shareable artifact to the workshop.

## SEI Jobs

The SEI is a great place to pursue your passion. Headquartered in Pittsburgh, Pa., the SEI also has offices in the Washington, DC, and Los Angeles, Calif., metropolitan areas.

Interested in working for the SEI? Below are a few recent employment opportunities. For more job listings and full position descriptions, check out the [SEI Careers page](#).

### About the SEI Bulletin

The SEI Bulletin is a biweekly newsletter designed to keep you up to date on SEI news, events, research, and other matters of interest to the SEI community. We hope you find the SEI Bulletin useful and informative.

### Send Us Your Story

Do you have a story about how an SEI technology has positively affected your team or organization? If so, the SEI would like to hear about it. Send a short summary of your success to [info@sei.cmu.edu](mailto:info@sei.cmu.edu) and you could be featured in a future issue of the SEI Bulletin.
